fmnp – vscode extension, that provides simple and fast file manipulations in your projects.

Usage

Type Ctrl+P to open vscode commands and search "fmnp" there or assign a shortcut to it.

File directories are calculated relative to a file, opened in editor, or to root of the project if any project is opened.

List of available commands:

```
m <source> <destination> # moves a file from source to destination
```

```
c <source> <destination> # copies a file from source to destination
```

```
d <path> # deletes a file
```

```
nd <path> # makes a new directory
```

```
nf <path> # makes a new file
```

```
o <path> # opens a file in editor
```

```
np <name> # makes a new project in user's home folder
```

Building

Make sure you have Node.js installed, then run:

```
npm install -g @vscode/vsce
```

Clone this repository:

```
git clone https://github.com/chefadekvat/fmnp
```

Install all necessary dependancies:

```
cd fmnp && npm install .
```

You can use vsce to package an extension:

```
vsce package
```

Now you you have .vsix package, which you can install to vscode

```
code --install-extension ./fmnp-<version>.vsix
```

Enjoy!
